DETAILED ACTION

Allowable Subject Matter

Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 recites "a nozzle unit for injecting an operation fluid to mix therewith the exhaust gas, and lowering an exhaust gas temperature down to or below a critical temperature of the impurity in the impurity collecting vessel, wherein the operation fluid is in a supersonic state by adiabatic expansion". Gu(6238514) teaches a trap apparatus installed in a vacuum exhaust system having a vacuum pump(16) for vacuum exhausting a processing apparatus(14) for performing a process on an object, for removing a gaseous impurity contained in an exhaust gas flowing through the vacuum exhaust system including an impurity collecting vessel installed in an exhaust passageway of the vacuum exhaust system. However, Gu teaches an aluminum chloride trap which uses deflection surfaces to condense aluminum chloride solids, and does not teach a nozzle unit for injecting an operation fluid to mix therewith the exhaust gas, and lowering an exhaust gas temperature down to or below a critical temperature of the impurity in the impurity collecting vessel, wherein the operation fluid is in a supersonic state by adiabatic expansion. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide an aluminum chloride trap which uses deflection surfaces to condense aluminum chloride solids, and does not teach a nozzle unit for injecting an operation fluid to mix therewith the exhaust gas, and lowering an exhaust gas temperature down to or below a critical temperature of the

impurity in the impurity collecting vessel, wherein the operation fluid is in a supersonic state by adiabatic expansion because Gu does not suggest such a modification. Claims 2-14 depend on claim 1 and hence are also allowed.

Claim 15 recites "condensing and/or coagulating the impurity by mixing an operation fluid and the exhaust gas injecting the operation fluid into the exhaust gas, the operation fluid being in a supersonic state by adiabatic expansion; and lowering an exhaust gas temperature down to or below a critical point of the impurity". Gu(6238514) teaches a trap apparatus installed in a vacuum exhaust system having a vacuum pump(16) for vacuum exhausting a processing apparatus(14) for performing a process on an object, for removing a gaseous impurity contained in an exhaust gas flowing through the vacuum exhaust system including an impurity collecting vessel installed in an exhaust passageway of the vacuum exhaust system. However, Gu teaches an aluminum chloride trap which uses deflection surfaces to condense aluminum chloride solids, and does not teach a step of condensing and/or coagulating the impurity by mixing an operation fluid and the exhaust gas injecting the operation fluid into the exhaust gas, the operation fluid being in a supersonic state by adiabatic expansion; and lowering an exhaust gas temperature down to or below a critical point of the impurity. It would not have been obvious to someone of ordinary skill in the art at the time of the invention to provide a step of condensing and/or coagulating the impurity by mixing an operation fluid and the exhaust gas injecting the operation fluid into the exhaust gas, the operation fluid being in a supersonic state by adiabatic expansion; and lowering an exhaust gas temperature down to or below a critical point of the impurity

because Gu does not suggest such a modification. Claims 16 and 17 depend on claim 15 and hence are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
